

# total light control | commercial

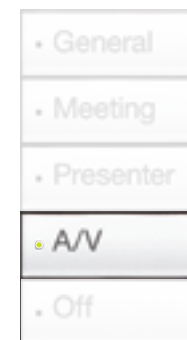

Beyond seating arrangements and AV equipment, lighting is a key element in a function room with changing needs. Lutron® Sivoia® QS drapery tracks and roller shades transform a space from reception hall to conference room and back.

The shades and drapes are open, filling the room with daylight and revealing the view to create an impressive, yet welcoming, environment for clients. The lights are dimmed to conserve energy without sacrificing an evenly illuminated conference space.

Shades are lowered to eliminate unwanted glare from direct sunlight, thereby maximizing room comfort during meetings.

Drapes close to darken the room for an A/V presentation while adding a soft, elegant touch to the space. General light levels are low to provide sufficient light for note-taking.

seeTouch® QS keypads provide control points throughout a space. Control shades, drapes, and lighting scenes at the touch of a button.
