

# total light control | residential

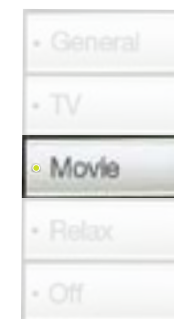

With Lutron®, choose the perfect lighting levels for different activities and occasions throughout the home. Transform the living room for family gatherings, reading, watching a movie, or entertaining.

The shades are partially open to reveal the view and take advantage of daylight for activities such as games or cleaning. The lights are off to save energy.

The TV scene creates a casual atmosphere. Shades are partially closed to create privacy and lights are set at a medium level.

A single button quietly lowers shades and lights for the perfect movie setting. Blackout shades close to block daylight and ensure a clear view of the screen without reflections or glare. Lights are dimmed for optimum viewing conditions.

Shades can be controlled independent of lighting scenes for added flexibility with GRAFIK Eye® QS.
